

## ABSTRACT

A wireless mobile device is equipped with a menu driver that facilitates direct navigation between main menu items or activities. In one embodiment, a user may 5 navigate from a last sub-menu item/sub-activity state of a menu item/activity to another last sub-menu item/sub-activity state of another menu item/activity. In one embodiment, sub-menu items or sub-activities are presented as in place scroll list replacing a selected sub-menu item/sub-activity.
